

Pivot-RP How-To

Faculty are encouraged to initiate an ongoing funding search in the Pivot-RP database. You can search for funding opportunities relevant to your research interests and needs, including grants, fellowships, awards/prizes, travel, conferences, publications, etc. Plus, you can set an alert to be emailed when new opportunities are posted. You can also use Pivot-RP to look for calls for conferences and journals as well as potential research collaborators. If you need additional assistance, please contact our college grant writer.

STEP 1: Login. Go to Pivot-RP at pivot.proquest.com, then sign in under the person icon in the upper right corner. On the Sign In screen, click “Access via My Institution Login”, select “University of Utah” from the dropdown, and click “Sign In”. Then enter your UNID credentials and log in following the prompts. Then, if you haven’t already, claim your Pivot-RP Profile (this is highly recommended; instructional video linked below), so the system will automatically suggest funding opportunities targeted for your research and other Pivot-RP users will be able to find you as a potential collaborator on research projects.

STEP 2: Basic Search. On the Pivot-RP dashboard, enter your desired search terms into the “Search Funding Opportunities” search bar and click “Search” to view results. (Tip: Initially keep your search broad – using non-technical words – and run multiple searches to refine your search terms to capture the most relevant opportunities.)

As an alternative, you can search by curated categories (*highly recommended*). To do this, click on “Funding” in the main menu (below the U logo). Then click “Search by Keyword” above the “search funding opportunities” search bar. Next, in the “build a query” search bar, select the applicable keyword(s) from the dropdown. (Tip: Keywords preceded with a small arrow can expand for a more refined search.) Select the keywords you want included in your query, then click “Search”. (Tip: You can select multiple keywords for your query, but it may be helpful to first search each term individually to get an idea of the results it yields.)

STEP 3: Advanced Search / Refine Search. To further narrow your search, use the filters in the left column on the Search Funding Results screen. For more options, click “Refine Search” just above the results list. Then on the Funding Advanced Search screen, set up filters to Find Opportunities *matching* your desired parameters. For example, under Applicant/Institution Location specify “United States”; under Funding Type select all that are applicable, such as “fellowships or post-doc awards”, “institutional, program or curriculum development”, and “research project grants and innovation”; and under Applicant Type select all that are applicable “academic institution”, “non-profit”, “individuals: early career and emerging in field”, and “individuals: mid-career to established in career”. (Tip: You can also search for funding for conferences and travel!) Then click “Search”.

Also, lower on the Refine Search screen, you can set up filters to *exclude* undesired results. For example, faculty may want to exclude “dissertation-thesis funding” under Funding Type and exclude “graduate student or pre-doc” and “undergraduate student” under Applicant Type. (Tip: Use “Match Any of the Fields” to exclude specific terms that keep showing up in the query’s search results but don’t fit what you really want.) Then click “Search”.

STEP 4: Save Search + Custom Alert. Click “Save Search” just above the results list on the Search Funding Results screen. Next, name your saved search and keep the box checked to send you a weekly email. Then click “Save”. (Tip: Create multiple saved searches to capture opportunities in disparate areas of interest.) If you need to make changes at any time, access your Saved Searches from the dropdown menu under the home icon.
